

## Chemical Formulas and Naming Study Guide

Be able to:

- Write the formulas for simple and complex salts
- Write the names for simple and complex salts
- Given a pair of soluble salts, determine:
  - The reactions that take place when they are combined
  - The formulas for the products of these reactions
  - The names for the products of these reactions
  - The solubilities for the products of these reactions
  - Which product is the precipitate of these reactions
